

Domo Engineer (Contract Role)

Contract:

This is a contractor role. You pick your title. You're responsible for your own taxes, equipment, and business setup. Decise does not control how, when, or where you complete your work.

This is a long-term, full-time contract role—not short-term freelance work or a side hustle.

Reporting:

We report to our clients. There's no ladder to climb here. No titles to chase.

If the idea of working without a path to a promotion or formal job title feels uncomfortable, we won't be the right fit. We don't do perks to lure people from other jobs. If you're happy where you're at, that's great. We're only for people who are ready for something different.

Location:

Fully remote. Occasionally, you may travel within the U.S. to meet clients.

About the Role:

We're hiring a ****Domo engineer who delivers real value—not just dashboards.**** You'll be responsible for maintaining and enhancing client Domo environments, building no-code and pro-code apps, surfacing real business insights, and moving fast. If you get energy from pulling the signal from the noise, drawing meaningful conclusions, and helping the client act on them quickly—you're the type we want.

If your first question is “what problem can we solve” and not “what are the requirements” then keep reading.

This isn't about making things look pretty. It's about clarity. Insight. Forward motion. You'll be in weekly client meetings sharing what the data is telling us—and what should happen next.

You will continuously monitor to ensure data and metrics are accurately reporting. You'll set and watch alerts so we can fix issues before the client ever sees them. You'll see things through. If you like finishing, not just starting, we're going to get along great.

This is a hands-on, high-speed, client-facing role. You'll need to be technically excellent in Domo, business-savvy enough to understand what matters, and confident enough to say it plainly.

What You'll Do:

- Maintain and enhance existing Domo client environments.

- Build new Domo apps (pro-code and no-code) using best practices.
- Design and deploy dashboards, ETLs, and data pipelines.
- Continuously monitor data health and metric accuracy.
- Set and monitor alerts to catch and resolve pipeline issues proactively.
- Pull insights from data and present them clearly in weekly client meetings.
- Actively shape business strategy through the lens of data.
- Work fast, solve problems, finish strong.

You'll thrive here if:

- You've been the "go-to" person for high-stakes Domo projects.
- You've ever delivered something meaningful faster than anyone thought possible.
- You can turn raw data into a business decision.
- You prefer direct truth to vague diplomacy.
- You work without babysitting—and don't need meetings to feel productive.

What You'll Need:

- 5–10+ years in data analytics, BI engineering, or similar roles.
- Strong expertise with Domo: Magic ETL, BEAST modes, DDX bricks, App Studio.
- Proven experience building and maintaining complex dashboards and apps in Domo.
- A bias toward action, clarity, and value—not just polish.
- Strong communication skills—plainspoken, direct, reliable.
- The ability to speak to clients like a partner, not a vendor.

Nice-to-Haves:

- Experience with Domo's AI/chat tools
- Familiarity with scripting or integrations (JavaScript, Python, SQL)
- Experience with other BI platforms (Looker, Tableau, Power BI)

What We Offer:

- Competitive contractor pay.
- Performance-based incentives.
- Fully remote, async-friendly team.
- Direct access to clients—no layers of middle management.

About Decide:

We're not big, and we're not trying to be. We're a modern advisory and delivery firm made up entirely of long-term contractors—including the founders. We work directly with executives to solve problems that matter, using a mix of modern software, analytics, and strategic thinking.

We move fast. We care a lot. We finish what we start. We don't believe in pointless meetings, internal ticket queues, or hiding behind process. Our clients trust us because we show up, say what we think, and then go make it happen.

Apply:

We're not on job boards. We don't want templated resumes or AI-written cover letters. We want to hear from real people. Reach out directly to Kyle or Keela with a short intro and examples of your work (Domo dashboards, public apps, etc.). If it clicks, we'll talk.

Interview Process:

- Zoom conversation with Kyle and Keela (camera-on, ~1 hour)
- Follow-up interview with a current team member
- No coding tests—we'll ask you to show us what you've actually built
- You'll hear from us within 48 hours either way
